Data Relating to July 1, 2010

Issued July 9, 2010

## **Oklahoma Wheat Forecast Unchanged From June**

## **OKLAHOMA:**

The State's July 1, 2010, **wheat** production forecast is at 128.7 million bushels, unchanged from last month, but 67 percent above last year according to the USDA-NASS Oklahoma Field Office. Acres harvested for grain, at 3.9 million acres, are up 400,000 acres from last year. Average yield is forecast at 33.0 bushels per acre, unchanged from the previous month forecast, but 11 bushels above 2009.

Harvest is winding down around the State. As of Sunday July 4<sup>th</sup>, winter wheat harvested acreage had reached 90 percent, one percentage point behind the five-year average.

#### **UNITED STATES:**

**Winter wheat** production is forecast at 1.51 billion bushels, up 2 percent from the June 1 forecast but 1 percent below 2009. Based on July 1 conditions, the United States yield is forecast at 46.9 bushels per acre, up 0.3 bushel from the previous forecast. Grain area totals 32.1 million acres, unchanged from the June 30<sup>th</sup> *Acreage* report.

Selected states, their winter wheat production and percent change from last year, include: **Kansas**, 369.0 million bushels, down slightly; **Texas**, 124.3 million bushels, up 103 percent; and **Colorado**, 92.0 million bushels, down 6 percent.

**Oat** production is forecast at 87.7 million bushels, down 6 percent from last year. If realized, this will be the lowest production on record. The estimated yield is 66.7 bushels per acre, down 0.8 bushel from 2009's record high yield.

**Barley** production is forecast at 182 million bushels, down 20 percent from last year. The estimated yield is 71.6 bushels per acre, down 1.4 from 2009. While the forecasted yield per acre is down 2 percent from a year ago, the expected decline in production is more a reflection of the lowest planted acreage on record and the lowest expected harvested acreage since 1883.
